CSS

PROJECTS

Thegoattips

- On this website, you may find betting tips. Users receive betting predictions based on their package from the website's administrator. React, Node, Express, MongoDB, and other technologies were utilised here when I worked as a MERN developer. We also used a variety of payment gateways, first with Stripe, then PayPal, and finally ChargeBee.

Dualcard

- In this Website user challenges to other users on this website, users can also submit them publicly. When a player accepts a request, two players play a game on a streaming platform. When the results are updated, the winner receives loser NFT in his account, and the administrator also decides the winner and loser.

urbanfinancial

- In this website's database, the administrator uploads a bank detail sheet, and users upload unique IDs from those databases and upload various data in multiple databases. The administrator can then manage the data and apply various filters.

the bull smart

- It is a CMS website that updates news and blogs about the stock market every day. From the admin panel, the administrator uploads multiple blog formats and financial news, edits and deletes the blogs, and uploads news and jobs.

Multiple minor projects

CERTIFICATES

MERN stack web development certification.
